

BigMarkt Live Readiness Checklist

Generated May 17, 2026 · Current readiness score: 96/100

BigMarkt is ready for a controlled beta / live pilot. Before a full public launch, complete and sign off the checks below.

Launch mode	Status
Controlled beta / live pilot	Approved after production environment variables are confirmed.
Full public launch	Approved only after privacy tests, live EA smoke test, and news cron smoke test pass.

1. Production Environment Audit

Confirm production Vercel, Railway, and Supabase environments contain the required variables and no real secrets are committed to GitHub.

- **Vercel:** NEXT_PUBLIC_SUPABASE_URL, NEXT_PUBLIC_SUPABASE_ANON_KEY, SUPABASE_SERVICE_ROLE_KEY, CRON_SECRET, WS_STATUS_URL, WS_STATUS_SECRET.
- **Railway WebSocket:** SUPABASE_URL, SUPABASE_SERVICE_ROLE_KEY, WS_STATUS_SECRET.
- CRON_SECRET is present and strong; WS_STATUS_SECRET matches on Vercel and Railway.
- Service-role keys exist only in server-side environments.
- No .env, Vercel metadata, service-role keys, exchange keys, or user credentials are tracked in GitHub.

2. Supabase Privacy / RLS Tests

Run the privacy test suite against staging or a production-like Supabase project.

```
SUPABASE_SERVICE_ROLE_KEY=... npm test -- tests/privacy.spec.ts --run
```

- Privacy tests run instead of skipping.
- Users cannot read or mutate another user's private trades, broker accounts, EA tokens, notifications, support messages, or leaderboard score rows.
- account_scores remains read-only to authenticated users; writes only happen through trusted server-side flows.

3. Live EA Smoke Test

Connect one MT5 terminal using a fresh EA token and verify the full live path.

- Generate a fresh EA token in /ea-setup and configure the MT5 EA with it.
- Confirm Railway /healthz is healthy and /ea-setup shows the EA connected.
- Send one small test trade or use a demo fill.
- Confirm token last_used_at updates and a journal row appears with capture_source = ea and trust_badge = auto_verified.
- Confirm account score recalculation runs when the token is linked to a broker account.
- Invalid or revoked tokens are rejected; /status only returns connections matching the current user's token IDs.

4. News Feed Cron Smoke Test

Verify the economic news flow in production.

- Call the news cron with the production CRON_SECRET.
- Confirm news_events receives/upserts rows and Journal > News shows events.
- Confirm event links open Forex Factory URLs when available.
- Unauthorized cron requests return 401; missing CRON_SECRET returns a safe server error.

5. Final Sign-Off
